

Branded PDF Download Setup (GitHub + Vercel + GoDaddy)

Objective:

Create a clean branded link like:

<https://downloads.yourdomain.com/FILE.pdf>

Step 1: Prepare File

- Rename file (use hyphens, no spaces)
- Create folder structure: public/FILE.pdf

Step 2: Upload to GitHub

- Create repository
- Upload 'public' folder (NOT zip)

Step 3: Deploy on Vercel

- Add New Project
- Connect GitHub repo
- Deploy

Step 4: Test

- <https://project.vercel.app/FILE.pdf>

Step 5: GoDaddy DNS

- Add CNAME
- Name: downloads
- Value: cname.vercel-dns.com

Step 6: Connect Domain in Vercel

- Add downloads.yourdomain.com

Final Result:

- Clean branded download link

Notes:

- Always upload inside 'public' folder
- GitHub updates auto-deploy
